

# CashTrak™ Keypad 4

CASHTRAK™ Simplicity

## CashTrak Keypad 4 [KP4]

The KP4 is a clean, simple, and robust solution for the retail environment. On its own, all standard safe operations can be performed. For a richer experience, we offer full support for a secure wireless connection to a tablet or smart phone device.

- Highly robust on-safe interface
- Intuitive design
- Expansion support for tablet and smart phone operation
- iButton and wireless fob support

# CashTrak Keypad 4

## FOUR WAYS TO INTERFACE WITH THE KP4

Our philosophy for user experience is one of balance and simplicity. All standard operations of the safe can be performed from the keypad button pad directly with best practices in menu design and pin number security that we have tuned over 20 years. The KP4 adds three additional methods of interacting with the safe to provide our customers with flexibility in access control, reporting, and settings configuration.

### KEYPAD BUTTONS

Fully sealed and grease resistant soft-touch keys and OLED display for accessing all standard safe operations.

### IBUTTON

Reader for button-style key fobs for fast authentication to perform standard safe functions.

### WIRELESS FOB

The latest in high security wireless authentication. This option allows for flexible key assignment and proximity based safe awareness.

### SMART DEVICE

Wireless link to popular smart devices including phones and tablets to provide a rich touchscreen experience. Save a USB charge cable with our integrated tablet charging port.
